Carried over from 8.1 with no structural changes.
Six top-level pages, one level deep.

VISUAL SYSTEM

Style Guide

Pink + warm neutral palette from the 8.1 design brief.
Every text pairing checked against WCAG 2.1 AA (4.5:1).

Color

Cream
#FFF8F5 · Page background

Blush
#FBE4EC · Tints, title bars

Pink
#F2B8CB · Shadows, frames

Rose
#E07FA3 · Decor only

Berry
#A8406A · Buttons, links

Ink
#3B2330 · Text, outlines

Muted
#6E5560 · Body copy

Sand
#EFE6E1 · Footer, panels

Taupe
#9C7E72 · Rare accents

Lilac
#C9B8F0 · Secondary tags

Approved contrast pairs

Aa Ink on cream
13.61 : 1 · AA

Aa Muted on cream
6.39 : 1 · AA

Aa White on berry
5.82 : 1 · AA

Aa Berry on cream
5.54 : 1 · AA

Aa Ink on blush
11.85 : 1 · AA

Aa White on rose
2.72 × : 1 · not used for text

Typography

Jersey 10 — Headings

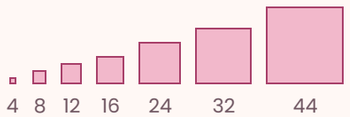

Aa Bb Cc 0123 ♥ — decorative, used 22px and up

Poppins — Body & UI

Aa Bb Cc 0123 — readable at small sizes

Style	Font	Size / line	Weight
Display	Jersey 10	56 / 60	400
H1 Section	Jersey 10	34 / 40	400
H3 Card	Jersey 10	20 / 26	400
Body	Poppins	15 / 24	400
Label / caption	Poppins	13 / 20	500–600

Spacing, radius & depth

REUSABLE PARTS

Component Sheet

Built once, reused on every page.
States shown: default · hover · focus · error.

01 · NAVIGATION

NCE | Home | About | Skills

Active = berry pill · hover = blush pill · default = plain

♥ BSIT student · open to OJT

Hello, I'm Nicole Camacho Edades!

I'm a first-year IT student who likes building cute, useful things for the web, from small games to systems that help my school run smoother. This is where I keep my projects, skills and certificates.

🎓 BSIT 1N-B

About me ♥

A little about who I am, where I study, and where I'm headed.

hello.txt

Hi! I'm **Nicole**, an IT student who enjoys the part of programming where something finally *looks* right on screen.

I started with simple HTML pages and kept going: a calculator, a POS system, two small games, and PasaU, a marketplace for students. I learn best by making things for people I know.

Outside class I'm on the cheerleading squad, which taught me a lot about practice and teamwork.

Education

BS Information Technology
1st year · Section 1N-B

Senior High School
ICT strand graduate, with work immersion and TESDA training.

Interests

UI and web design
Making small games
Cute pixel-style art
Cheerleading
Building tools for my school

Career Goals

Become a **front-end / UI developer** who designs interfaces that are pretty *and* easy to use.

Short term: land an OJT where I can work on real websites.

01 **Based in**
the Philippines 🇵🇭

02 **Favorite project**
PasaU marketplace

03 **Learning now**
React & UI accessibility

Want to work together?
Say hi on the Contact page →

My Skills

What I can build with, and how I work with people.

technical_skills

Web

HTML CSS JavaScript

Responsive layouts, forms, small interactive pages

Programming

Python Java C#

OOP basics, file handling, simple games

Databases

MySQL

Tables, CRUD queries for POS and library systems

Design tools

Canva Figma

Wireframes, mockups, posters

other_skills

Communication

Explaining ideas clearly to classmates and clients

Teamwork

Group projects and a cheerleading squad

Time management

Balancing school, training and projects

Adaptability

Picking up new tools quickly when a project needs them

Currently learning

React Git & GitHub UI accessibility PHP

Skills are self-assessed and grow with every project.

PasaU

Student marketplace

Certificates & Achievements

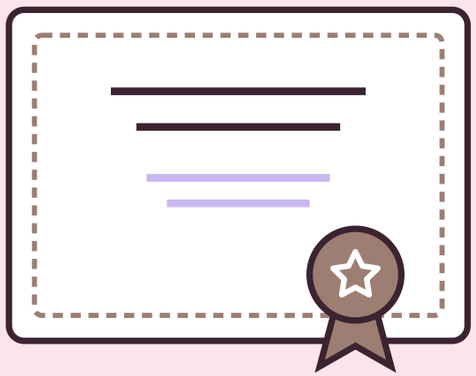

Proof of the hours, the training and the teamwork.

SHS Work Immersion

Completed my senior high work immersion, applying ICT skills in a real workplace: troubleshooting, encoding and helping staff with daily tasks.

Senior High School

TESDA Certificates

National skills certification from TESDA, proving hands-on ability in computer systems setup and servicing.

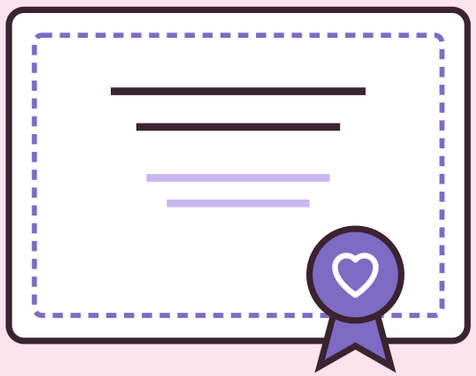

TESDA

PasaU Certificates

Recognition for PasaU, my student-only marketplace project, from planning and design to a working prototype.

Project recognition

Cheerleading

Member of the school cheerleading squad. Competitions taught me discipline, timing and trusting my team.

Extracurricular

WIREFRAME → HIGH FIDELITY

Changes from the 8.1 Wireframes

Six documented changes.
Layout and sitemap otherwise kept as approved.

01 Neutral palette → pink + neutral

All pages

The 8.1 frames were all beige. The final design adds the pink palette my brief promised, while keeping the warm neutrals for backgrounds and the footer.

02 "(description)" boxes → real content in window cards

About, Skills, Home

Placeholder boxes now hold actual copy, inside reusable cards with a title bar, outline and pink shadow.

03 Underlined nav → pill for the active page

Navigation

The thin underline was hard to spot. The current page is now a solid berry pill, so visitors always know where they are.

04 Duplicate "Game Development" labels renamed

Projects

Two cards had the same name. They are now "Pixel Runner" and "Memory Match", and every card shows its tools, plus filter chips (All, Web, Systems, Games).

05 Contact form rebuilt

Contact

Labels sit above fields, required fields are marked, the message box is taller, and the Send button moved inside the form so it reads as one unit.

06 Desktop hamburger removed; mobile projects aligned

Nav, Mobile Home

The desktop nav already showed every link, so the extra menu icon was dropped. The mobile "iSEE" card is replaced with QR Attendance so mobile only features projects that exist on desktop.

EXPLANATIONS

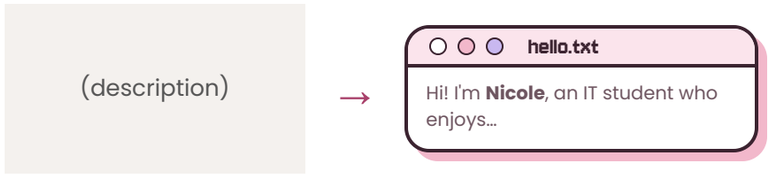

Design Change & Accessibility Decision

One design change and one accessibility decision, each explained on its own.

design_change.txt

DESIGN CHANGE

Empty boxes became window cards with real content

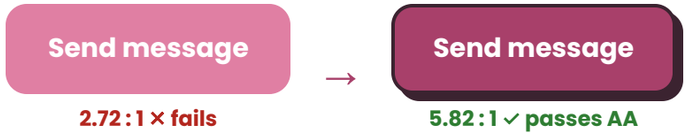

What changed. In 8.1 every text area was a flat beige box labelled "(description)". In the final design each one is a white card with a dark outline, a pink offset shadow, and a small browser-style title bar with three dots.

Why. The flat boxes all looked the same, so nothing told a visitor where to look first. The title bar borrows the window motif from my own sitemap, which ties the pages to the cute pixel style I described in my brief. The outline and shadow also separate each card from the cream background, so the layout reads as clear groups instead of one big beige area. The same card is reused on About, Skills, Home and Contact, which keeps the site consistent.

accessibility.txt

ACCESSIBILITY DECISION

Buttons use deep berry, not light pink

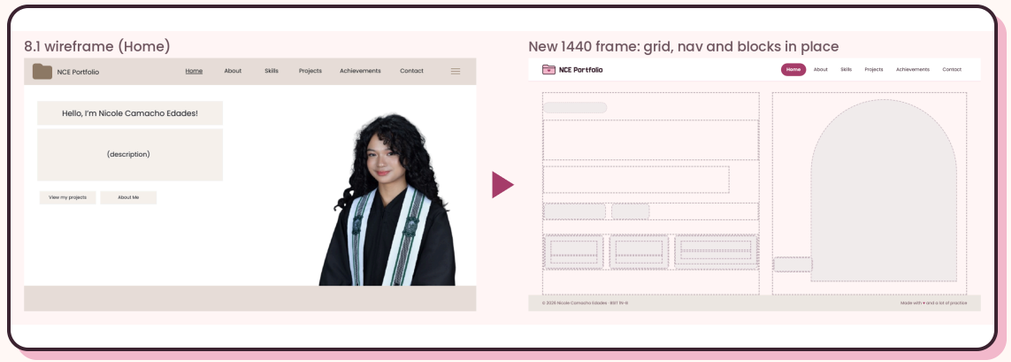

The problem. My first idea was white text on the bright pink (#E07FA3). I checked it with the WCAG contrast formula and it scored only 2.72 : 1. The minimum for normal text is 4.5 : 1, so people with low vision, or anyone on a phone in sunlight, could struggle to read the button.

The decision. Every button, active nav item and link uses a darker berry (#A8406A), which scores 5.82 : 1 with white. The light pinks are kept for backgrounds, shadows and decorations only, never for text. I also gave every button and input a visible 3px focus ring, so keyboard users can always see where they are.

PROCESS

Process Screenshots

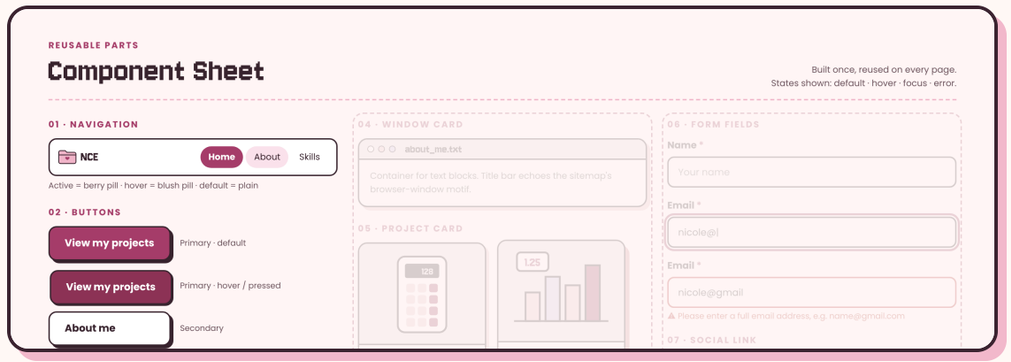

Three stages of the build.

STEP 1

Initial conversion of wireframes into high-fidelity frames

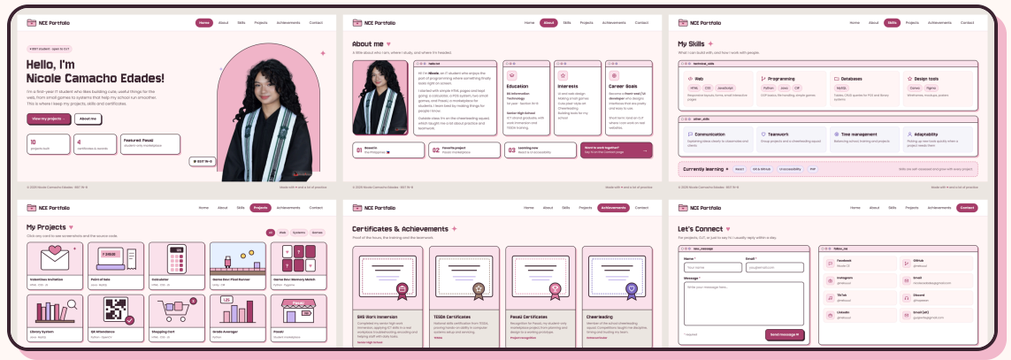

Each 8.1 wireframe was rebuilt on a 1440px frame. The nav, grid and content blocks were placed first, before any color, type or images.

STEP 2

Developing the component sheet and visual system

Palette, type scale and the first components (nav and buttons) were finished first. Cards, form fields and icons were built next (faded here).

STEP 3

Completed high-fidelity page set

All six desktop pages built from the same components: Home, About, Skills, Projects, Achievements and Contact.

IMAGES BY PAGE

Image Assets for Each Page

Every image used in the prototype, grouped by the page it appears on.
